

BERRY METALS ANNOUNCES NEW SOUTHERN EAF REPAIR FACILITY *Alabama shop set to open in July 2023*

Harmony, PA— May 5, 2023 — Today, Berry Metal Company announced the purchase and planned opening of our 3rd US-Based production facility – based in Bay Minette, AL, enabling southern EAF customers a more regional repair facility for all Berry Metal Equipment and other mill service needs. The new location will be fully operational in early July 2023.

“This BMC Bay Minette EAF Shop is an exciting next step in Berry’s continued growth in the EAF Arena and allows us to continue to better serve our customers and increase their overall vendor experience in partnering with Berry now and in the future.” said George Boy, President & CEO at Berry Metal Company.

Positive Customer Impact

Many customers are already benefiting from utilization of Berry’s EAF Equipment and Repair Services. Adding the southern capacities will allow for additional growth, market penetration and improved response/turn-around times that our industry expects from Berry Metal. The regional repair approach allows us to be closer to, quicker to and more responsive to our customer base for equipment supply, repair and engineered mill services.

“The continued growth of BMC’s engineering services and equipment in the steel industry has allowed for this stimulating new venture in a major industrial corridor of Alabama. This facility will be the heart of BMC’s southern operations allowing for expedited repairs and new product turn arounds, as well as direct onsite customer support to better serve our customers.” said Michael Diana, Chief Operating Officer, Berry Metal Company.

BMC Bay Minette Full Production Opening

BMC Bay Minette Full Production Opening will occur during the first full week of July 2023. We are currently making some final upgrades to the building, bringing in equipment and training our new employees. In June 2023, we plan to begin transitioning some current repair work being performed in our Harmony facility to the Bay Minette workshop for the full production opening in start of Q3.

***Berry Metal Company** is a leading provider of innovative furnace technology for steelmaking and ironmaking.
