

TAPHOLE SANDER

DRIVING EAF INNOVATION FROM DESIGN TO DELIVERY.

Berry Metal is driving EAF technology that can help you maximize operational efficiency, increase safety and lower operating costs.

SOME EXAMPLES:

Our new Taphole Sander automates feeding of sand into the EBT and replaces the manual operation with a faster, more consistent and safer solution. You'll get increased reliability, reduced power-off times and shorter tap to tap cycles.

Berry's Tundish Preheater, featuring proprietary technology, uses natural gas and air burners that produce up to 5.5 million BTU's for rapid and even heating.

Berry's Lime Injection process delivers up to 1200 lbs./min and process sizing from dust to 1-1/2". You'll get increased sourcing flexibility, reduced downtime/maintenance and elimination of lime waste on the floor and out the 4th hole.

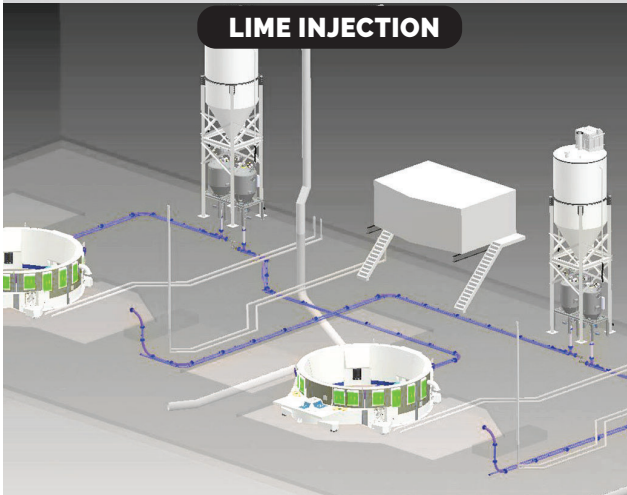

Berry offers total solutions for significantly improving your EAF process. Call us.

INNOVATION:

Partnering in solutions you can trust.
